

DBSAE – Defense Information System for Security

Overview

The Defense Information System for Security (DISS) is tasked with consolidating the Department of Defense's (DoD's) security mission into an Enterprise System to automate implementation and improve national investigative and adjudicative standards to eliminate costly and inefficient work processes, and increase information collaboration across the community. DISS will improve information sharing capabilities, accelerate clearance-processing timelines, reduce security vulnerabilities and increase the DoD's security mission capability. DISS is currently under development and will replace the legacy Joint Personnel Adjudicative System (JPAS).

Capabilities

When fully deployed, DISS will be a secure, authoritative source for management, storage and timely dissemination of and access to personnel security information with the flexibility to provide additional support structure for future DoD security process growth.

DISS will accelerate processes, reducing security clearance vulnerabilities, decreasing back-end processing timelines, and supporting simultaneous information sharing within various DoD entities as well as among a number of authorized federal agencies.

DISS will also provide improved support to the Insider Threat and Personal Identity Programs and will be comprised of capabilities that are currently part of the Joint Personnel Adjudication System and Defense Central Index of Investigations. It will create a robust and real-time capability for all DoD participants in the military services, and DoD agencies, and will also include automated records check (ARC) functionality and creation of an adjudicative case management capability with e-adjudication functionality.

Benefits

- Provides a single point of entry to all DoD adjudicators to access personnel security, adjudicative case management and decision support functionality
- Provides near continuous intra-Central Adjudication Facility (CAF) communications on a web based platform

DISS is a program within the Business Transformation Agency's Defense Business Systems Acquisition Executive (DBSAE) directorate. The DBSAE is responsible for driving the successful implementation of DoD systems and initiatives in support of the Department's Business Transformation goals. Its mission is to develop, coordinate, and integrate projects, programs, systems and initiatives providing DoD enterprise-wide business capabilities to the warfighter.

Stakeholders Served:

All of DoD
